Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 21-23, 9, 11-12, 14-15, and 19-20 rejected under 35 U.S.C. 102(b) as being clearly anticipated by Yee et al.

Yee et al. teaches a surface plasmon resonance (SPR) analysis system and method having an electrically conductive SPR layer (Fig. 9 Item 71 Col. 23), an integrally formed SPR sensor in optic communication with the SPR layer (64), a transparent housing (62), light source (60), a flow cell in fluid communication with the layer (63), and electrostatic means in the form of two electrodes (17 and 18) to impart a molecular interaction bias across the chamber and are part of the path of the path of the detection chamber (Fig. 9 and Col. 23) as recited in claims 21-23, 9, 11-12, and 14-15.

The device and method of Yee et al. is directed towards the enhanced measurement of molecular interactions, specifically in the measurement of redox reactions including competitive binding assays as recited in claims 19-20 (Col. 6-9 and Col. 11 are directed toward the specific analytes disclosed as being usable in the apparatus and method of Yee et al.).

Allowabl Subject Matter

Claims 10, 13, and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art fails to teach or suggest a SPR device recited in independent claims 11, 14, and 21, where the molecular interaction bias applied to an analyte in a flow cell is magnetic as recited in claims 10, 13, and 16.
